VSBackup is a Visual Studio extension for backing up and restoring a solution without having to leave Visual Studio. VSBackup is a very useful extension if you are not using any version control or if you are in the prototyping stage. This is not a substitute for source control. Take care of your code files. Only full backups are performed.

PREREQUISITES

VSBackup uses Robocopy for the backup process. Please make sure that Robocopy.exe is located at the following location, 'C:\Windows\System32' before the backup operation. As of now, VSBackup has only been tested with Visual Studio 2017.

OPERATION

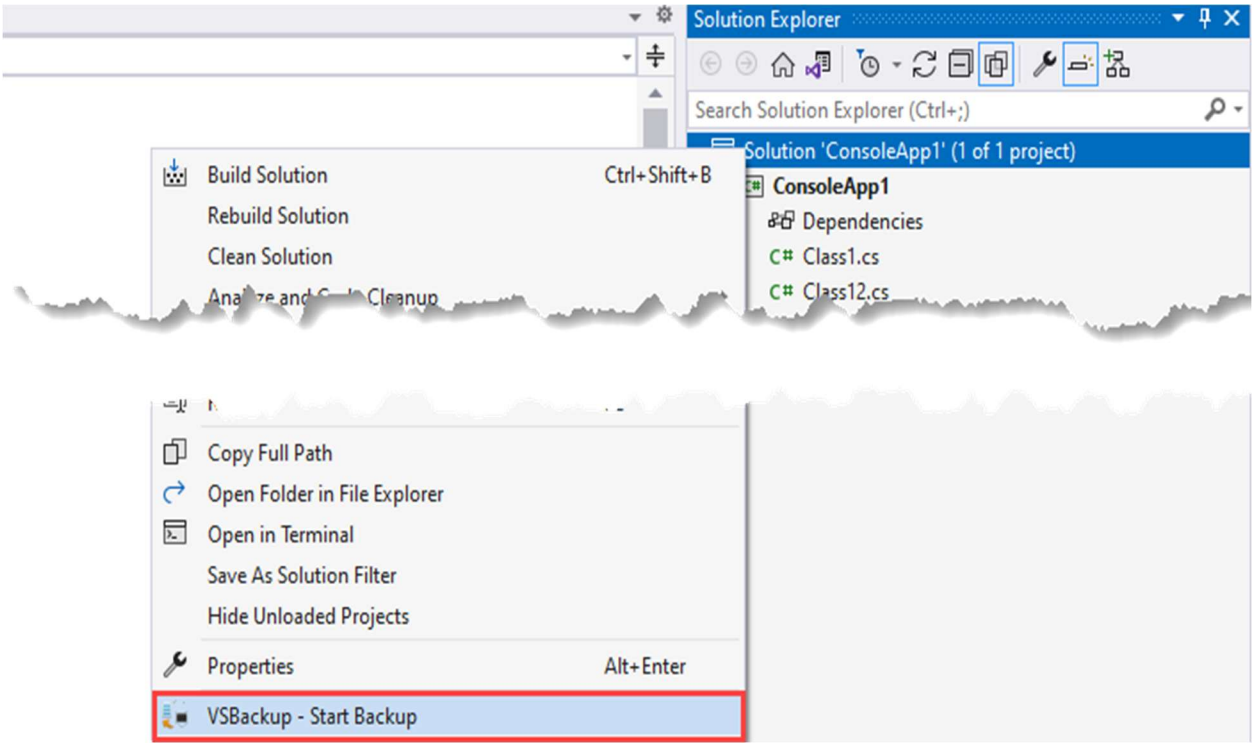
BACKUP

To start a backup, either load an existing solution or create one. You will find the commands for VSBackup in the VSBackup menu on the Tools menu.

Copyright © 2020-2021 Lonestar Softworx

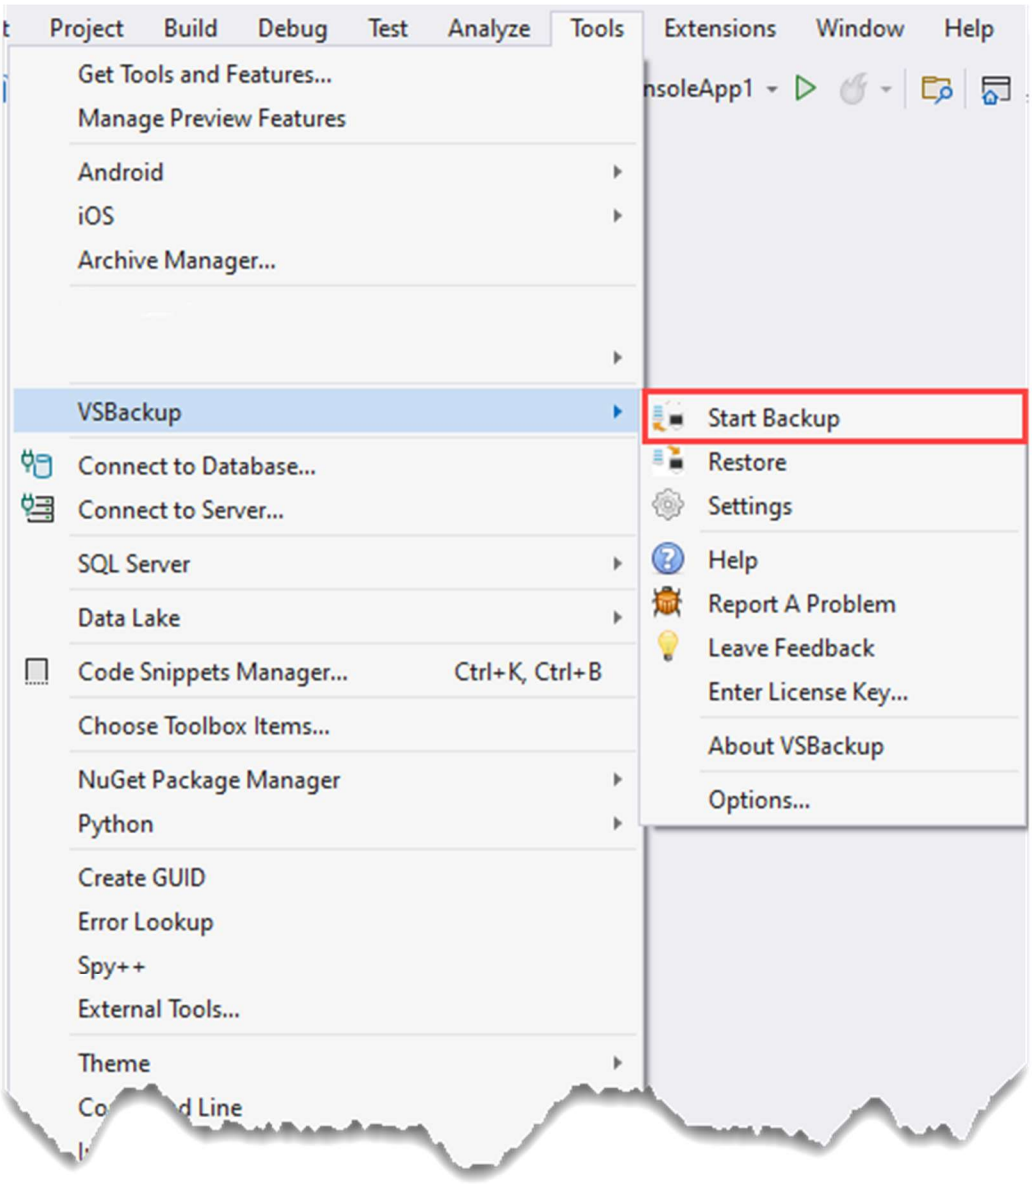
 Copyright © 2020-2021 Lonestar Softworx

There are two ways to start the backup process. The first way is to right-click on the solution and then click the **VS Backup – Start Backup** menu item on the context-menu.



The other way is to click the **Start Backup** menu command located in the VSBackup Tools menu. If this is the first backup for the solution, the settings form will be displayed. Either change the location of the backup or accept the default backup location. See the Settings section for instructions. Click the OK button.

 Copyright © 2020-2021 Lonestar Softworx



Once the backup is complete, either success or fail, a message box will be displayed.

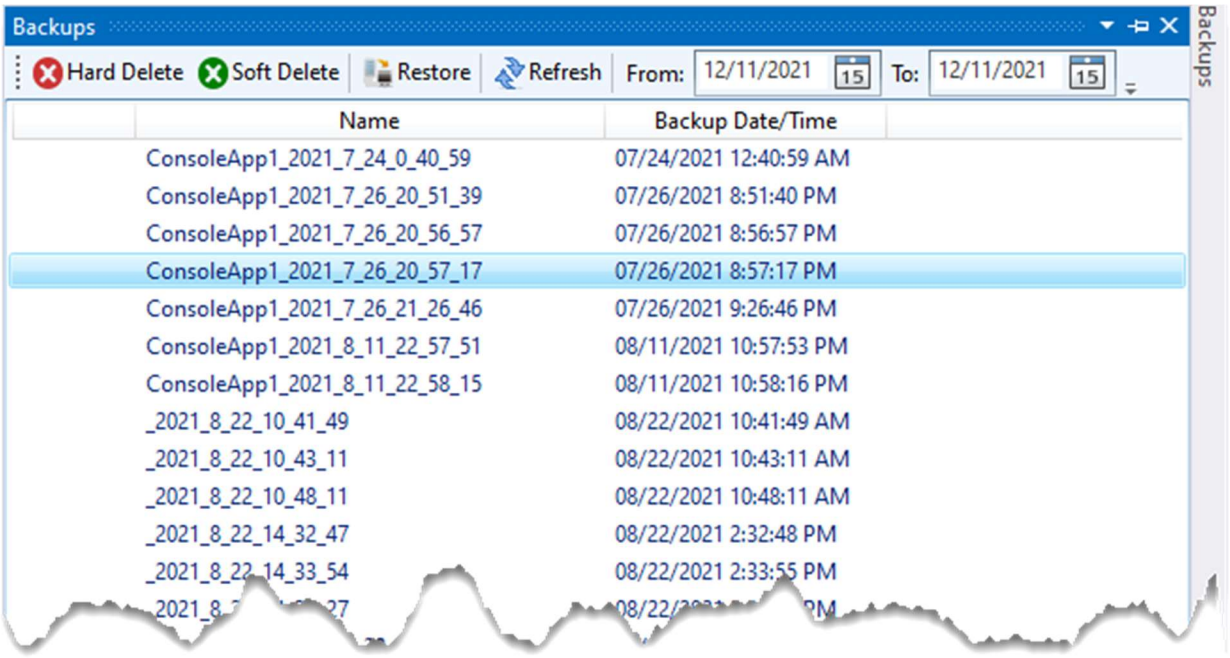
VIEWING BACKUPS

To view a list of backups for the solution, click View -> Other Windows – VSBackups – Backups.

Copyright © 2020-2021 Lonestar Softworx

 Copyright © 2020-2021 Lonestar Softworx

A window with the backups associated with the solution will appear.



Each backup will have an image next to image denoting the type of backup.

Entries that have this image, will show that the backup was zipped. This image, will show that the folder was backed up without compression.

To sort backups, click the column you want to sort by, and it will sort by ascending or descending order.

The Backups tool window has six toolbar items:

Hard Delete	Deletes the backup from the list as well as the backup location.
Soft Delete	Deletes the backup from the backup list only.
Restore	Restores a backup to a specified location.

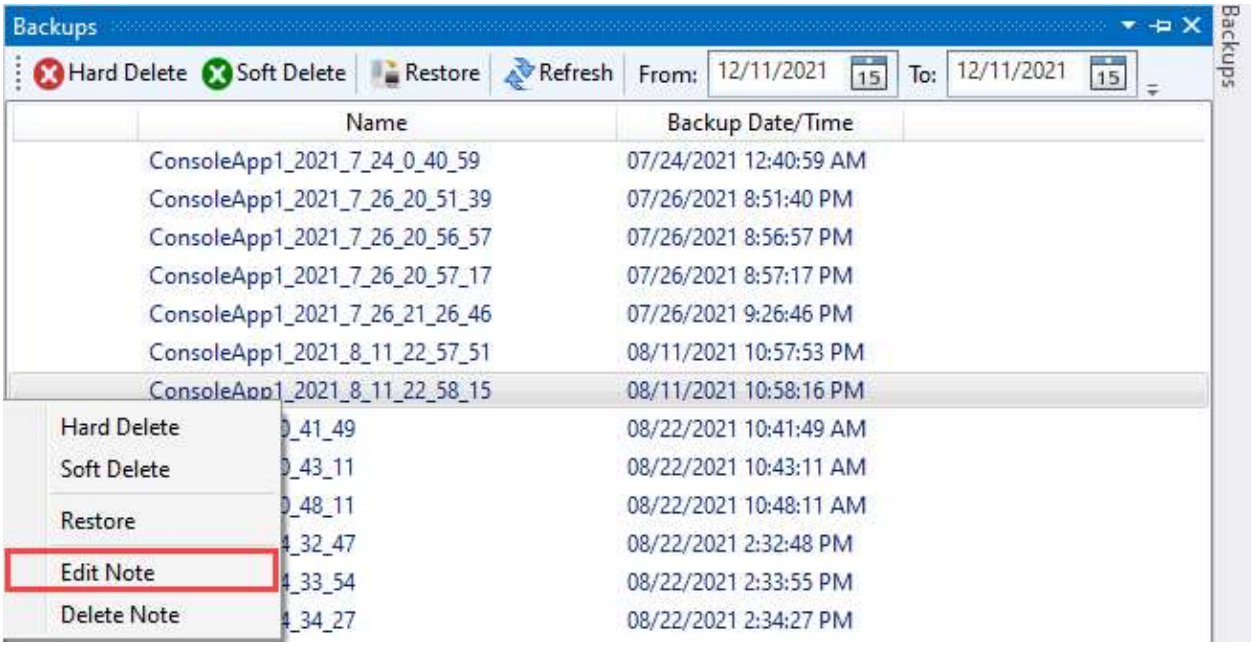
 Copyright © 2020-2021 Lonestar Softworx

Refresh	Refreshes the backup list.
From/To	Allows you to filter the backups by date. To revert to the complete list of backups, click the Refresh button.

BACKUP NOTE

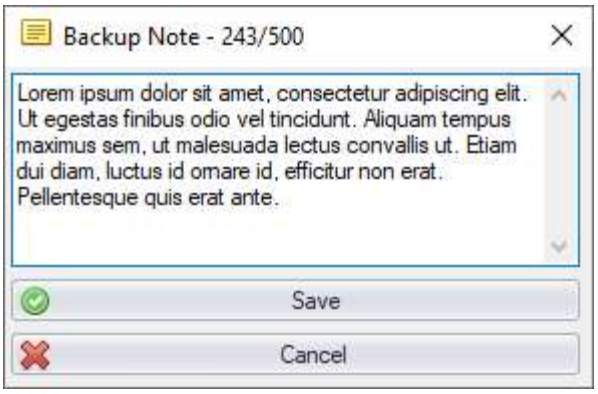
You can add a note or edit an existing note to a backup.

Right-Click on the backup you want to enter a note for. Click the **Edit Note** menu item.

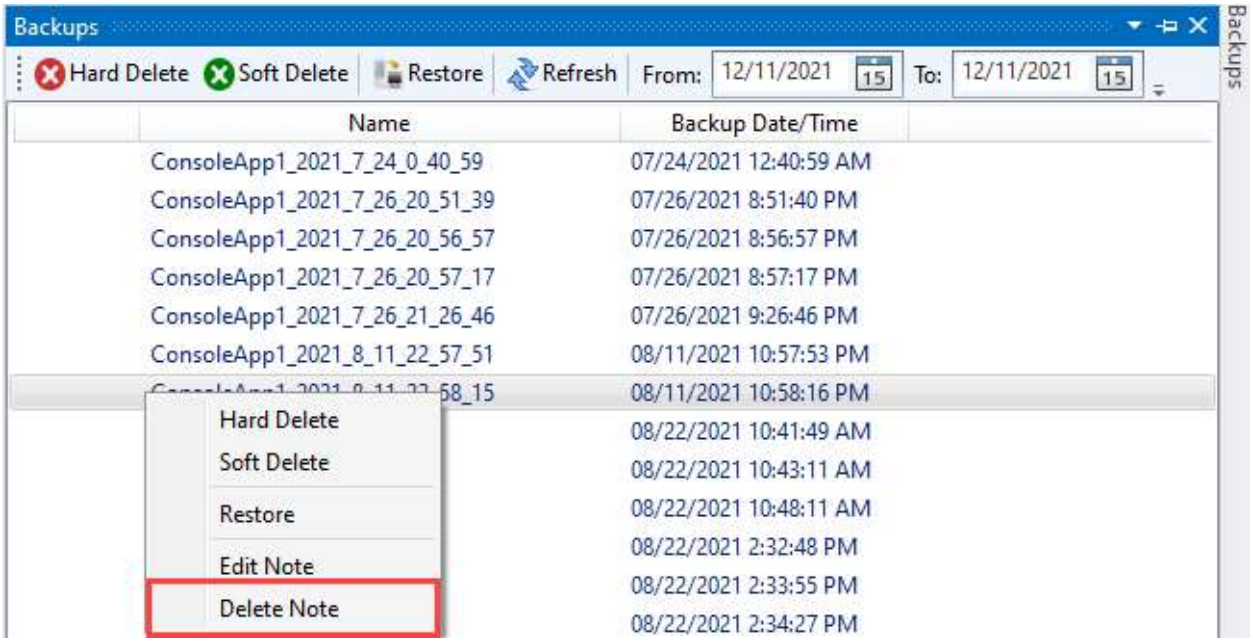


Enter the text of the note. To save the note, click the **Save** button. To cancel the save, click the **Cancel** button.

Copyright © 2020-2021 Lonestar Softworx



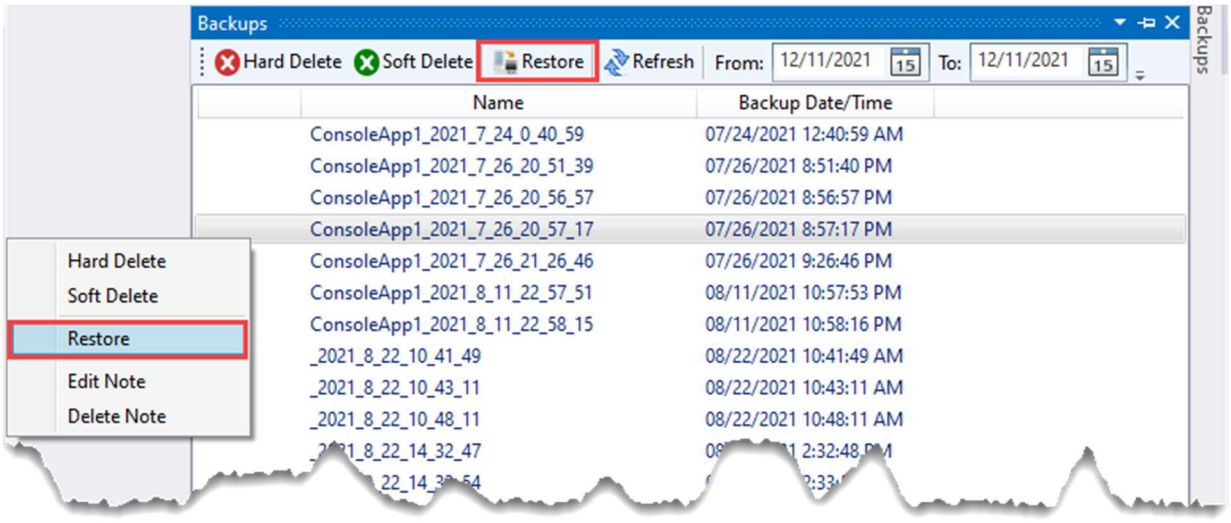
To delete the note, click the **Delete Note** button.



RESTORE

To restore a backup, select the backup from the Backups tool window. Either select **Restore** from the toolbar, right-click on the selected backup then click **Restore** from the menu or click Restore from the VSBackup menu.

 Copyright © 2020-2021 Lonestar Softworx



Copyright © 2020-2021 Lonestar Softworx

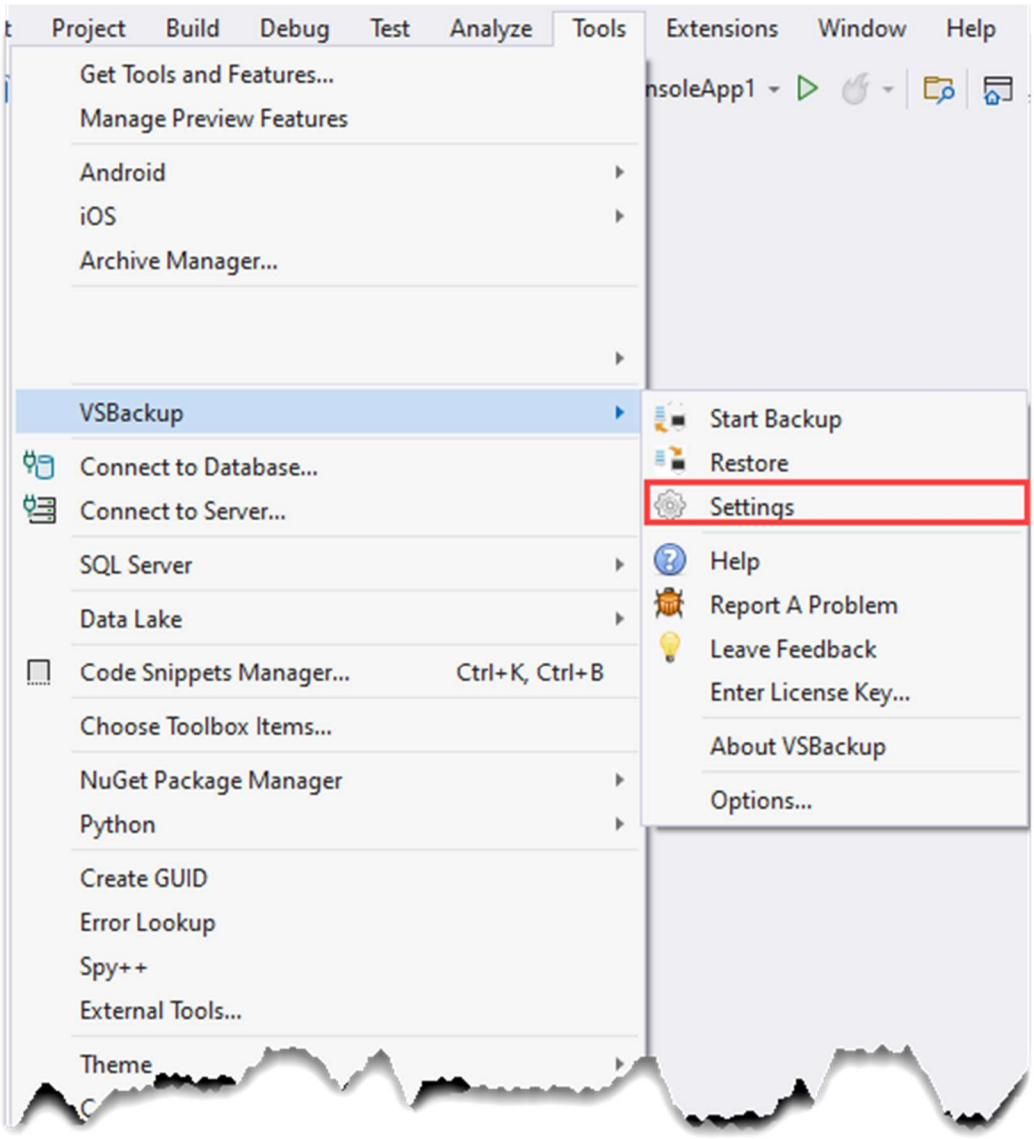
 Copyright © 2020-2021 Lonestar Softworx

Once the restore process has completed, either with a success or failure, a message box will be displayed.

SETTINGS

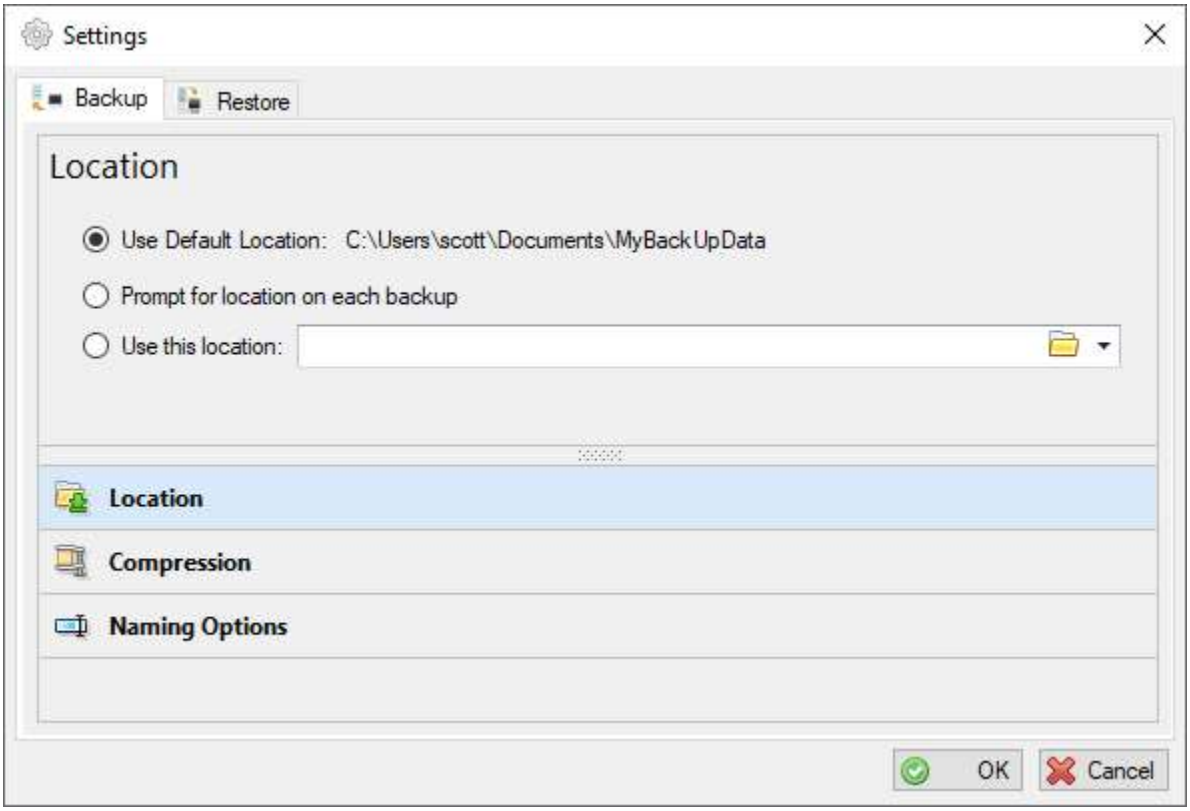
To change the backup and restore settings, click the **Settings** menu command located in the Tools menu.

Copyright © 2020-2021 Lonestar Softworx



The following form will be displayed with two tabs.

 Copyright © 2020-2021 Lonestar Softworx



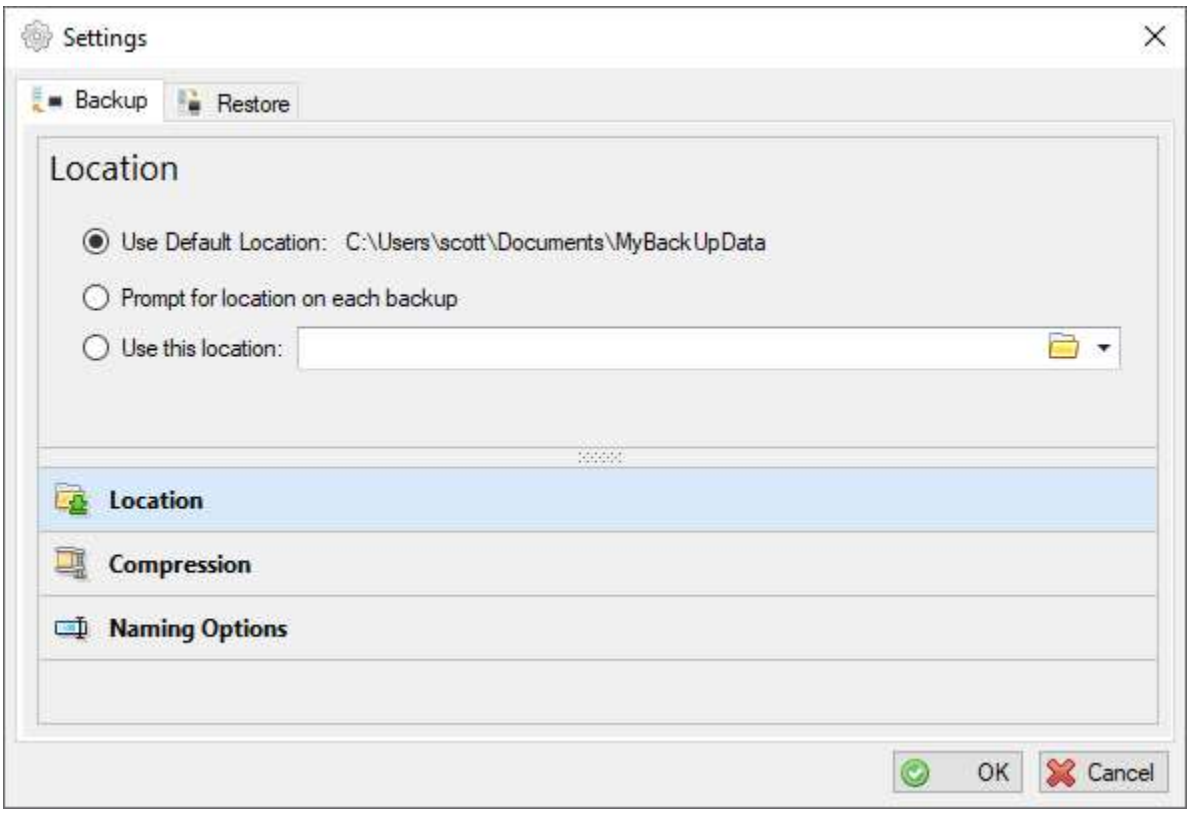
BACKUP

LOCATION

There are three options for setting up the location for the backup:

Use Default Location	The backup will always be stored at this location.
Prompt for location on each backup	Displays a prompt for the location of the backup.
Use this location	Allows you to either type in a location, select a location by clicking the folder icon , or selecting a previously saved restore location by clicking the drop-down arrow, .

Copyright © 2020-2021 Lonestar Softworx

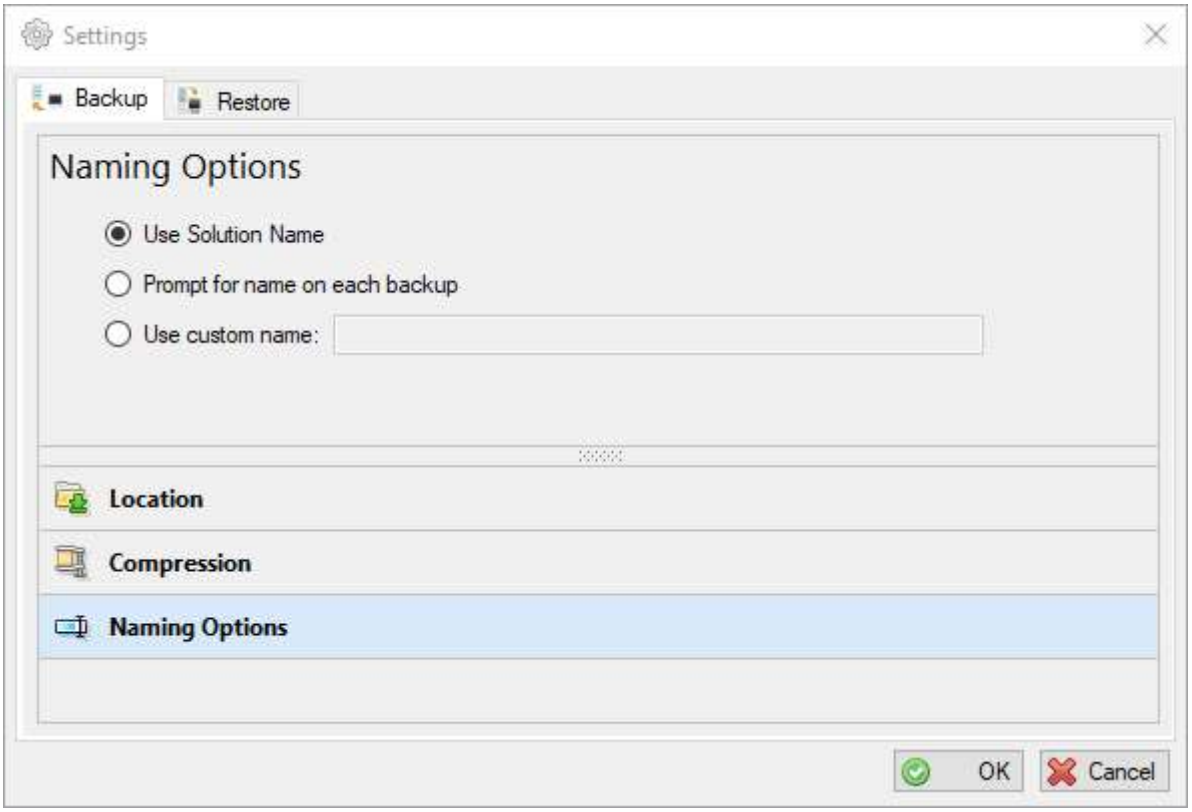


NAMING

There are three options for naming the backup:

Use Solution Name	The backup will have the same name as the solution.
Prompt for name on each backup	Displays a prompt for the name of the backup.
Use Custom Name	The backup will have the name of whatever is entered into the text box.

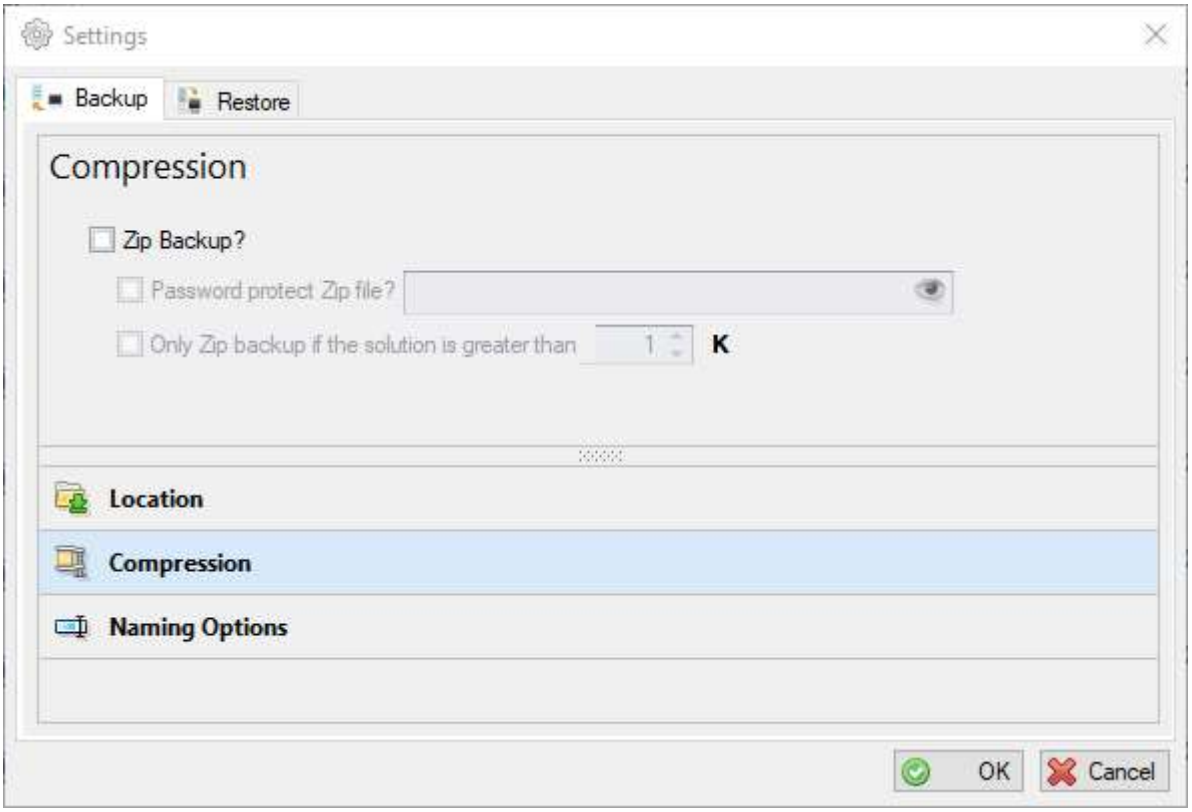
Copyright © 2020-2021 Lonestar Softworx



ZIP (COMPRESS)

To Zip (compress) the backup, enable the **Zip Backup** option.

Copyright © 2020-2021 Lonestar Softworx



To password protect the Zip file, enable the **Password Protect Zip File?** option. Password must be at least 8 characters in length. To view what you have typed, click the button. To hide what you typed, click the button.

To only back up the solution directory if the folder size is greater than a certain amount, click the **Only Zip backup if the solution is greater than** option and enter an amount.

To save the settings, click the OK button. To discard any changes or just to exit the form, click the Cancel button.

A form will appear listing the selected and entered options. You can turn this form off and on by going to **Tools → Options → VSBackup → General Settings** and checking or un-checking the **Show Backup Options Summary**.

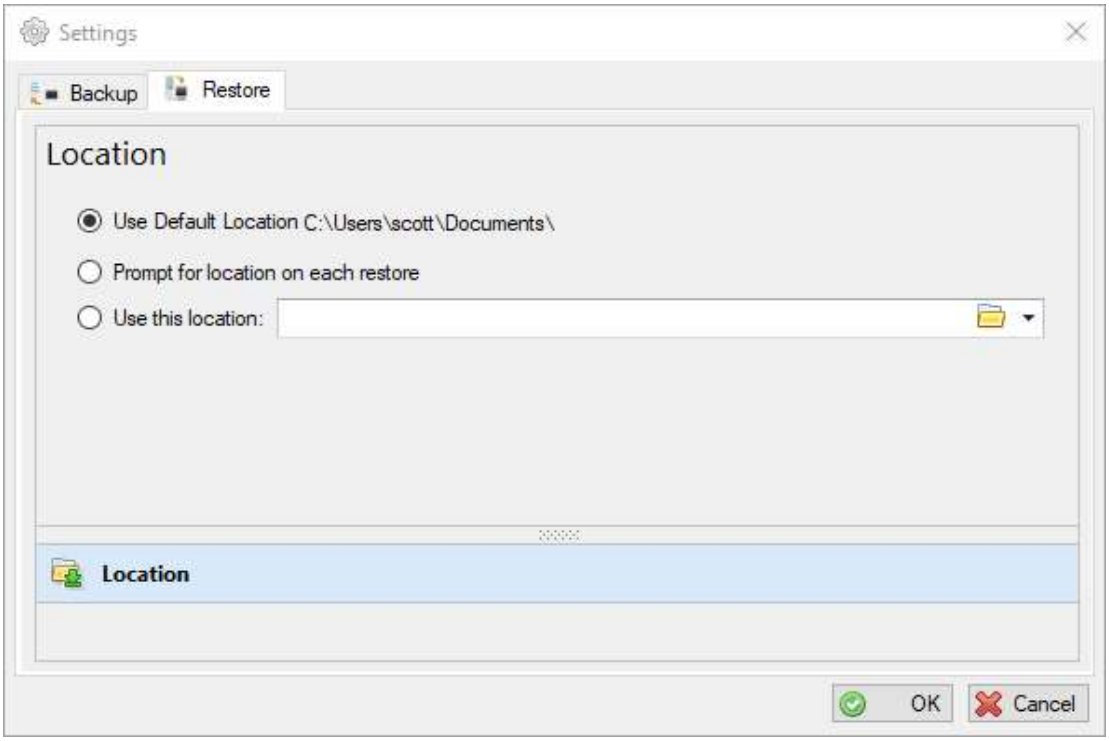
RESTORE

LOCATION

 Copyright © 2020-2021 Lonestar Softworx

There are three options for setting up the restore location for the backup:

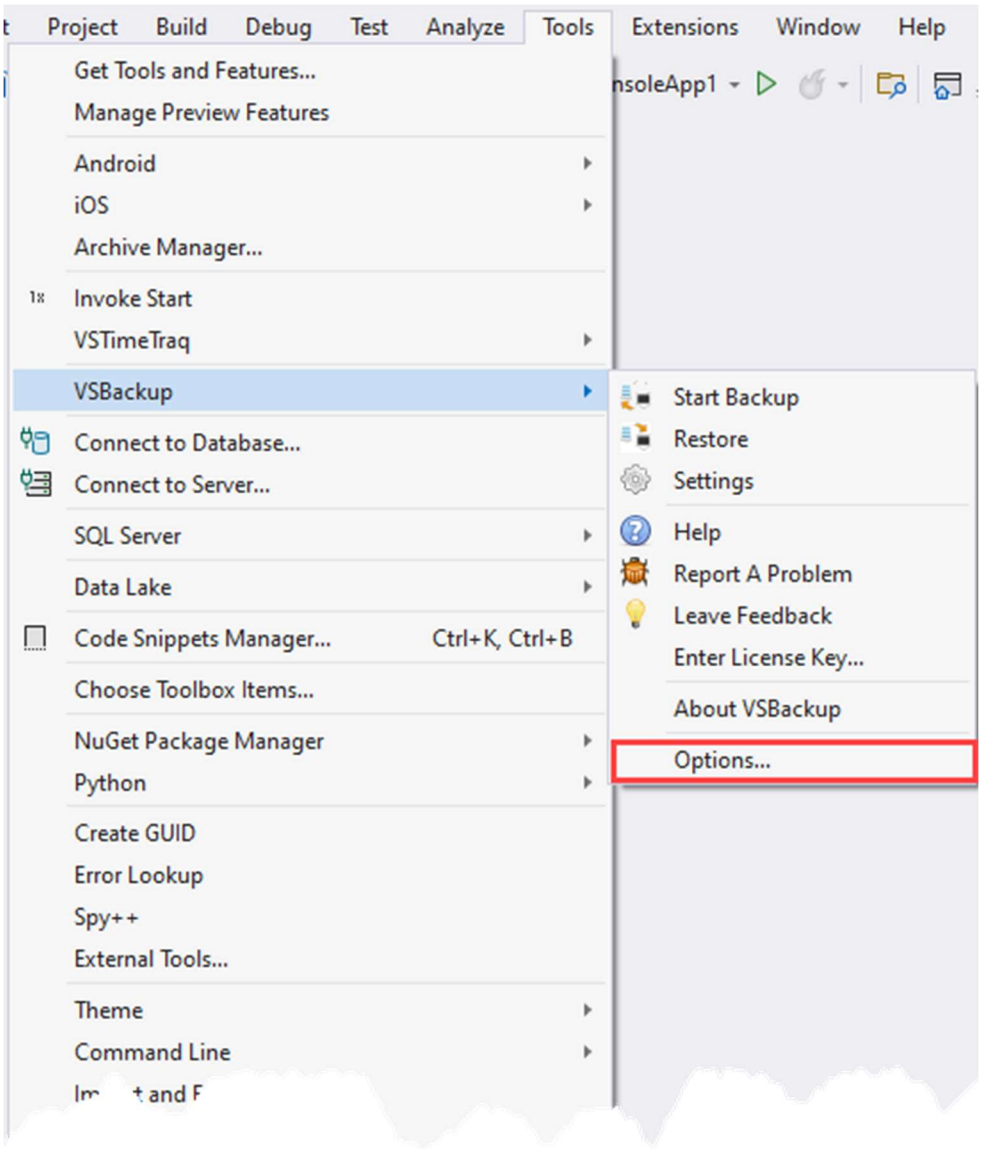
Use Default Location	The backup will always be restored to this location.
Prompt for location on each restore	Displays a prompt for the location of the restore.
Use this location	Allows you to either type in a location, select a location by clicking the folder icon , or selecting a previously saved restore location by clicking the drop-down arrow, .



OPTIONS

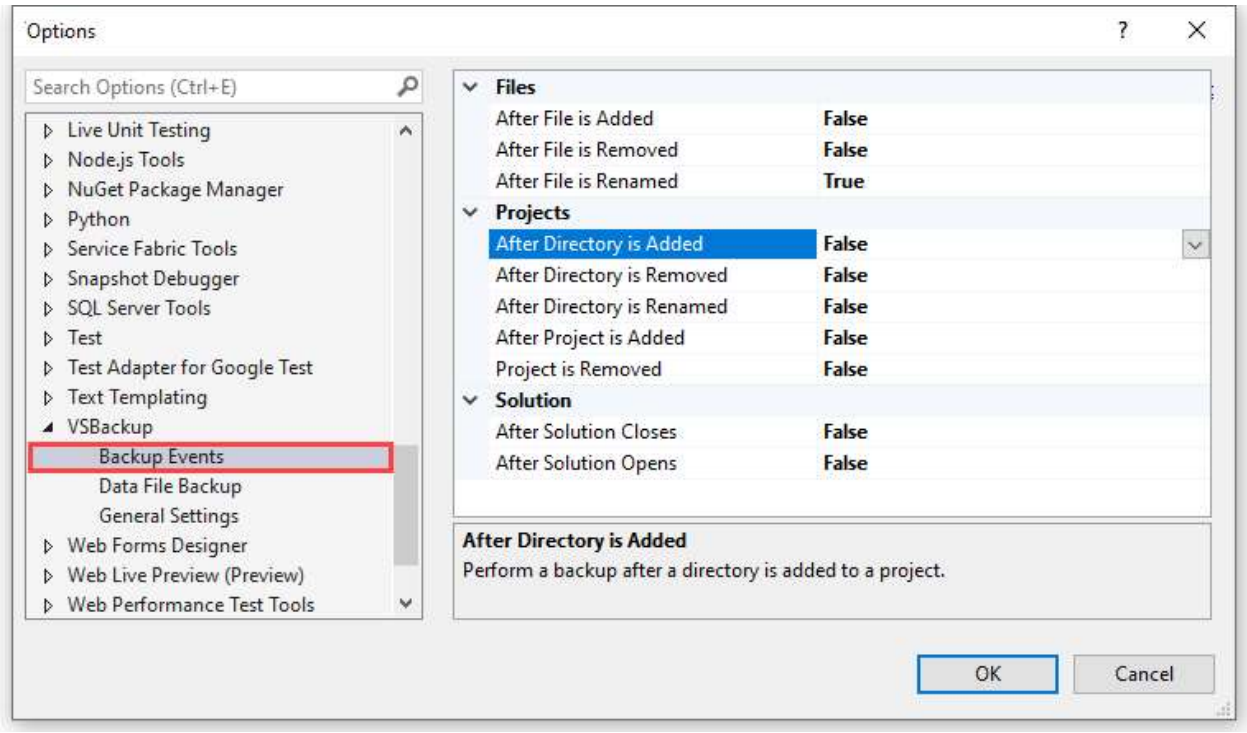
Copyright © 2020-2021 Lonestar Softworx

To access the options for VSBackup, you can click **Tools** → **Options** and scroll down to VSBackup or you can select the click the **Options** menu item on the VSBackup menu.



BACKUP EVENTS

Copyright © 2020-2021 Lonestar Softworx

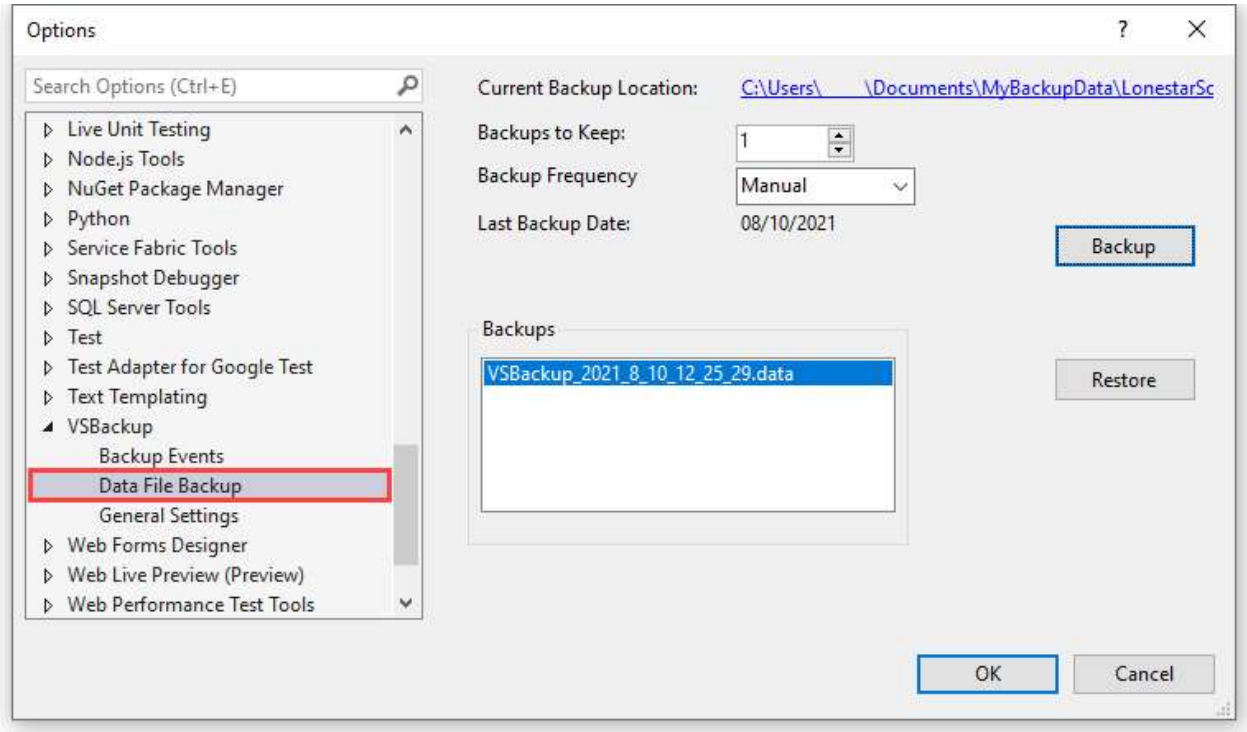


You can now back up your solution when an event fires in Visual Studio. Select either True or False from the drop down for each option and then click the **OK** button to save your changes.

DATA FILE BACKUP

To back up the data file, go to **Tools → Options → VSBackup** and select the **Data File Backup**

Copyright © 2020-2021 Lonestar Softworx



To change the location, click the link labeled **Current Backup Location** and then select the preferred backup location.

To keep to only a of certain of backups, change the **Backups to Keep** value by clicking the down or up arrow button.

To change when the data file will be backed up, select an option from the **Backup Frequency** drop-down. The Daily, Weekly, or Monthly options can only be chosen if a manual backup has been performed first. These backups will occur when the solution closes.

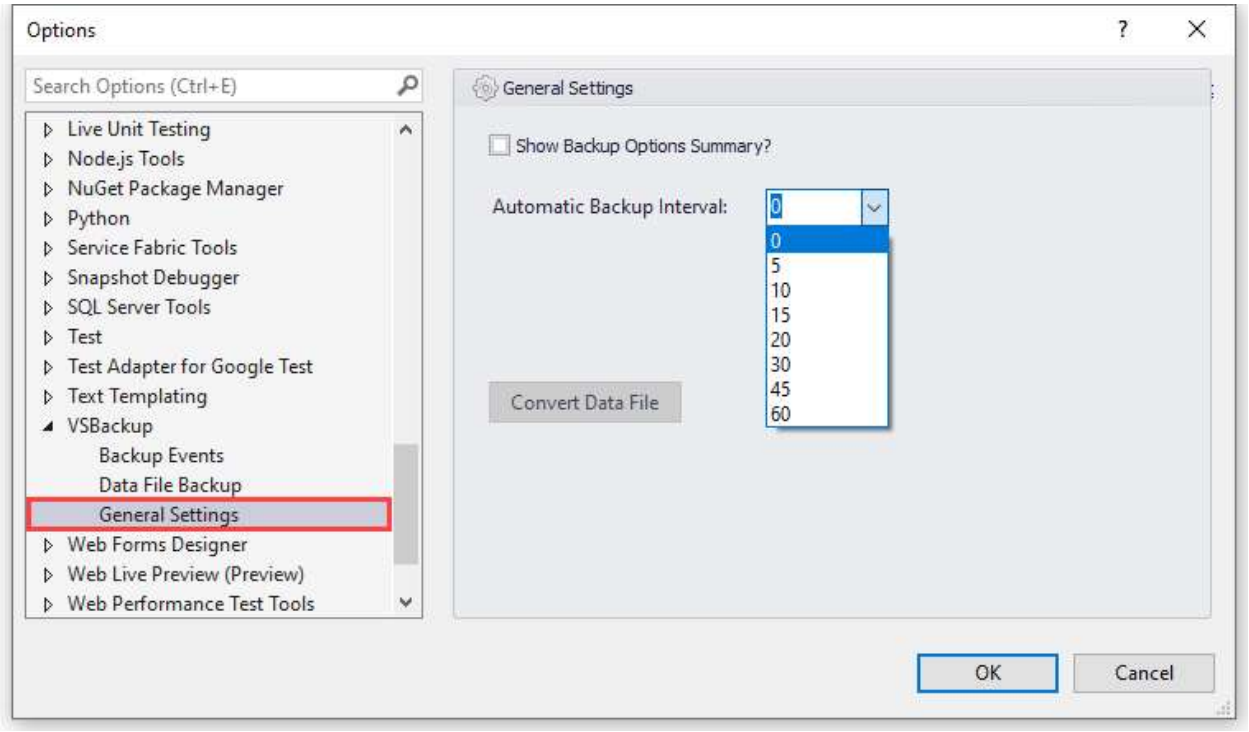
Manual	The backup will not be done automatically and will be performed every time when the button is clicked.
Daily	The backup will occur every day after the last backup date.
Weekly	The backup will occur every 7 days after the last backup.
Monthly	The backup will occur every 30 days after the last backup date.

Copyright © 2020-2021 Lonestar Softworx

To restore a data file backup, select the backup you want to restore from the list labeled Backups. Then click the **Restore** button. You must close then open a solution to reload the backups for that solution.

GENERAL SETTINGS

To turn on or to turn off the backup settings summary form, check or un-check the **Show Backup Options Summary** checkbox.



To initiate automatic backups at a specified interval which are in minutes, select the value from the drop down labeled **Automatic Backup Interval**. Selecting 0 will turn of the automatic backups.

Click the **OK** button to save.

Copyright © 2020-2021 Lonestar Softworx

Starting with Version 2.x, if you are upgrading from Version 1.x, the data file must be converted. This option will only be enabled if you have to convert the data file.

FEEDBACK

To leave a suggestion or feedback on how we can improve VSBackup or to rate VSBackup, click the **Leave Feedback** menu item.

RELEASE NOTES

- 6.0.994.2021 - 01/17/2021
  - Added the ability to add or delete a note on a backup.
  - Added the ability to filter the backups list by a date range.
  - Added Options command to the VSBackup to take the user directly to the Options page for VSBackup.
  - Added Help command to take the user to the documentation web page for VSBackup.
  - Enclosed the Backup operation in thread.
  - Added Backup location options.
  - Added Restore location options.
  - Redesigned the Settings form.
- 5.1.980.2021 - 11/23/2021
  - Fixed an issue with the Install Target being incorrect in the VSIX manifest file.
- 5.0.979.2021 - 11/22/2021
  - Converted to Visual Studio 2022.
  - Minor bug fixes.
  - Removed data conversion process.
- 4.0.944.2021 - 09/13/2021
  - When a backup is right clicked, a context menu is displayed with commands to either perform a Hard or Soft Delete or to Restore a backup.

.

Copyright © 2020-2021 Lonestar Softworx

- When the Backups area is right-clicked, a context-menu will display with the Refresh command.

- Re-arranged and grouped menu items in the VSBackup Tools menu.

- When certain events happen in Visual Studio, a backup is performed.

➢ 3.1.550.2021 – 06/30/2021

- [FIXED]: Going to Tools --> Options --> VSBackup causes Visual Studio to Crash.

- [FIXED]: The backup location is not saved.

- [FIXED]: The License Key activation fails.

➢ 3.0.540.2021 – 05/07/2021

- Added the ability to leave feedback, a suggestion, or give the extension a rating.

- Backing up the data file manually or on a schedule has been added. Also, the ability to restore a data file backup has been added.

➢ 2.2.352.2021 – 04/02/2021

- [FIXED]: The name of the backup is the solution directory name instead of the solution name.

➢ 2.1.342.2021 – 04/01/2021

- Various UI modifications.

➢ 2.0.340.2021 – 03/26/2021

- Various UI enchantments and modifications.

- If a backup is selected to be restored and if it does not exist, the option to remove it from the backup list has been added.

 Copyright © 2020-2021 Lonestar Softworx

- The ability to Zip (compress) a solution has been added. A password for the Zip file can be set. Also, an option to Zip the solution when it is greater than a specified amount has been added.
- Sorting can now be performed on the Backup Date/Time and Name columns in the Backups list.
- An icon will appear next to the backup denoting the type of backup, directory or Zip.
- There is 30-day trial period of the extension. When the trial period ends, backups can no longer be performed.
- The format for the data file has changed.

➢ 1.5.102.2021 – 01/21/2021

- [FIXED]: When the extension failed to load in Visual Studio 2017 due to an assembly reference issue.

➢ 1.4.101.2021 – 01/12/2021

- [FIXED]: When opening a solution in Visual Studio 2019 using the Open Recents dialog, the Visual Studio events would not fire causing the backup settings and backups not to load. Nor could a backup profile be created.

➢ 1.3.100.2021 – 01/06/2021

- Added logging

➢ 1.2.99.2021 – 01/06/2021

- Upgraded for Visual Studio 2019

➢ 1.1.93.2021 – 01/01/2021

- [FIXED]: When submitting a Problem Report, leaving a required field empty and then filling it in would result in a loop when re-submitting the Problem Report

➢ 1.87.2020 – 12/24/2020

- Initial Release
